

IRIE KOKEN CO., LTD. Shikoku Plant

# Environmental Policy

## Basic philosophy

We, in recognition of global environment conservation as the most important issue common to all humankind, concretely promote our commitment to environmental issues by expanding business activities, and, at the same time, contribute to society.

## Environmental Policy

For harmonizing business activities, including design, development, and production with the environment, IRIE KOKEN CO., LTD. Shikoku Plant has established an environmental management system to promote its efforts to continuously make improvements and prevent pollution in order to reduce environmental load.

### 1. Regulatory compliance

We shall not only strictly comply with environment-related laws and regulations, agreements and regional rules, but also make further environment conservation efforts by additionally establishing voluntary standards within our technological and economic scope.

### 2. Continual reduction of environmental loads and prevention of pollution

1. We shall make efforts to use electricity, gas, water and other energy efficiently, contributing to the prevention of global warming.
2. We shall make efforts to reduce waste generation and recycle and reuse generated waste.
3. We shall make efforts to reduce the use of chemicals bearing significant environmental loads and strengthen the storage management of harmful substances.

### 3. Improvement of environmental management system

1. We shall implement internal environmental audits to maintain the environmental management system and improve the management level.
2. We shall make efforts to improve knowledge and skills by providing all employees with training and awareness building activities for enhancement of their environmental consciousness and recognition.

### 4. Announcement and communication of the environmental policy

1. The environmental policy shall be made known to all employees of the plant.
2. The environmental policy shall be announced externally with willingness.
3. With the recognition of locational conditions of the plant, communication with related authorities and local residents in order to cooperate and improve the environment of the local community.
